

Handout: Finnyquigs

Instructions

Read the article below and then answer the questions.

Finnyquigs

There are 10,000 kinds of quigs in the world. However, only finnyquigs make finny. There are three types of finnyquigs: stips, follers, and terps.

The stip's job is to smat the kots. The follers are smaller than the stip, and their jobs are to make the finny and to take care of the kots. The terp's job is to flim with the stip. A stip must flim in order to smat foller kots. If the stip doesn't flim, the stip can only smat terp kots.
